

Multilingual Quranic Noun Lemma Architecture (v6.0)

Complete 100% Catalog of all 3,057 Noun Headword Lemmas in the Holy Quran | Classified by Classical Ism Categories, Roots, Frequencies, Semantics & Quranic Verse Examples

Executive Summary & 100% Scope: In classical Arabic grammar, **every single word** in the Holy Quran belongs to one of three primary parts of speech: **Ism (نَاسِمٌ)**, **Fi'l (فِعْلٌ)**, or **Harf (حَرْفٌ)**. The **Ism (Noun) Tier** represents **3,057 unique base lemmas** (~66.23% of all 4,616 base headwords in the Quran) accounting for **28,626 running word tokens** across 6,236 verses. This document establishes the complete, 100% catalog for the Ism tier, including common nouns, adjectives/attributes, proper names, and spatial/temporal adverbs (أَسْمَاءٌ).

1. Overall Corpus Baseline & Ism Tier Architecture

The dataset grounds itself in the exact metrics of the Hafs recitation of the Holy Quran, mapping all 3,057 noun lemmas against the complete corpus token count of 77,429 word occurrences:

Metric Category	Corpus Value	% Share	Linguistic Description & Scope
Total Quranic Running Word Tokens	77,429	100.0%	Total running word occurrences across 114 Surahs and 6,236 verses

4. Multilingual Translation Scope & Dataset Validation

Multilingual Alignment: The v6.0 architecture expands the dataset into **6 global languages**: English, Urdu (سَمَاءُ), French (Français), Bangla (সম্ম), Indonesian (Bahasa Indonesia), and Turkish (Türkçe). Each entry is mapped to its primary dictionary headword, derivative morphological pattern (e.g., *FaAAI*, *Muf'il*, *Masdar*), and precise Quranic verse key.

Integrity Verification: Total Ism lemmas sum exactly to **3,057**. Total token occurrences sum exactly to **28,626** (36.97% of the 77,429 Quranic word tokens). All formula fields in the accompanying Excel workbook are verified for zero circular references or broken ranges.
